Farmers Tools

Tips

Welcome

The Farmers' Portal of the Department of Agriculture & Cooperation is a platform for farmers to seek any information related to agriculture. Detailed information on farmers' insurance, agricultural storage, crops, extension activities, seeds, pesticides, farm machineries, etc. is provided. Details of fertilizers, market prices, package and practices, programmes, welfare schemes are also given. Block level details related to soil fertility, storage, insurance, training, etc. are available in an interactive map. Users can also download farm friendly handbook, scheme guidelines, etc.

Interface Languages

Language :

- » HTML
- » CSS
- » Bootstrap
- » Php

Hyper Text Markup Language

- » HTML stands for Hyper Text Markup Language, but you already know that and that wont help. I'll keep it simple:

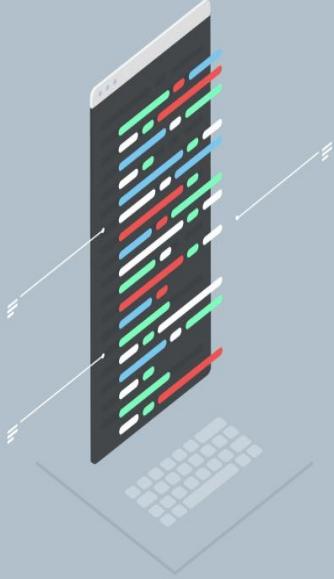

- » It is a Language used to write web pages, what ever you see on any website, it has been written in HTML. It is used to make a basic structure of any website, like www.google.com said it acts as the skeleton for any web page. The images you see, the paragraphs, headings, columns, whatever, it is all written in HTML. Learning HTML is the first step towards web designing.

- » After HTML comes CSS which out which HTML looks very ugly, hence CSS are the clothes of that skeleton you made using HTML. It is responsible for the design and colors and shape.

Cascading Style Sheets

Coming to CSS, it stands for *Cascading Style Sheets*. They are actually rules that declare what presentation, layout, style, color, etc. to give to an HTML element hence the name *Style Sheets*. Coming to the word *Cascading*, here it means that the closer a CSS rule is to an element the more precedence or priority is given to that rule for that HTML element. Because, CSS can be used to style HTML elements in three ways.

1. **Inside Attribute:** CSS rule applied as an attribute to the HTML element. Has the most precedence.
2. **Inside the same HTML file:** Many CSS rules can be written inside the same HTML file for elements. It has less precedence than the above one.
3. **In a separate file:** CSS rules are written in a separate file and then linked to the respective HTML file. Has the least precedence.

BOOTSTRAP

Bootstrap is free and open source front end development framework for the creation of websites and web apps. The bootstrap framework is built on html,css,javascript and php to facilitate the development of responsive,mobile first site and apps.

PHP

- PHP files can contain text, HTML, CSS, JavaScript, and PHP code
- PHP code is executed on the server, and the result is returned to the browser as plain HTML
- PHP files have extension ".php"

Registration Form

In the registration form ,A new farmer or seller can register.He has to fill some detail about himself,like his name,mobile no,email id,age ,address and a password.A user id and password is unique for all.

Registration Form

```
$q="select * from newuser where phone='$phone'";

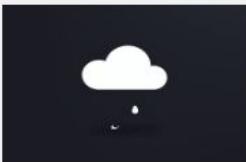

$result=mysqli_query($conn,$q);
$n=mysqli_num_rows($result);

if ($n>=1){ ?>
<hr>

<div class="alert alert-danger">
<h4><strong>Warning !</strong> You have Already Registered in <strong>Sharecropper</strong></h4>
</div>

<?php }
else{
$query ="insert into newuser (fname, lname, password, phone, email, pincode, address, age, sex)
values('$fname','$lname','$password','$phone','$email','$pincode','$address','$age','$gen')";
$data = mysqli_query($conn,$query);
if($data){
?>
```
